

SRAM® ORIGINAL PARTS

CAUTION:

The SRAM Warranty policy does not cover damages caused by the use of non-SRAM parts.

Use only SRAM parts with SRAM components.

Installation of parts and accessories not originally intended could result in less than optimal performance and/or injury.

For in-depth service information on SRAM products, refer to our website at www.sram.com/ service. Contact your local SRAM distributor or dealer for ordering information.

Information contained in this publication is subject to change at any time without prior notice. Your product's appearance may vary from the diagrams contained in this catalog.

NOTES

ZIPP HUB AND FREE HUB IDENTIFICATION

ZIPP Cognition NSW Front and Rear Hubs

We introduced the Cognition hubset along with the 303, 404, and 808 NSW wheelsets. The rear wheel utilizes a star-flanged design for straight pull spokes. Inside the rear hub, the Axial Clutch mechanism utilizes metal injection molded ratchet rings and magnets in place of the typical pawl and spring system. Cognition hubs are compatible with SRAM, Campagnolo, and XDR driver bodies.

ZIPP 88/188 V10 Hubs

We introduced the 88/188 V10 hub along with the 404 Firestrike wheel set. This wheel came with ceramic bearings and has slotted spoke holes on machined flanges. This hub was made for rim brake only, not offered in a disc brake platform.

ZIPP 77/177 - Rim Brake Hubs

This hub was designed for rim brake use on the 30 Course, 202 Tubular, and 202, 303, 404, and 808 Firecrest Carbon Clinchers. The hub shell utilizes a star-flanged design for straight pull spokes.

ZIPP 77D/177D - Disc Hubs

This hub was designed for disc brake use on the 30 Course, 202 Firecrest, 303 Firecrest, 404 Firecrest, & 808 Firecrest. The 77D and 177D have machined hub flanges for straight pull spokes, and the axle end caps on the hub's axle are interchangable with different wheel spacings and wheel attachment systems, including quick-release, 12x100, 15x100, & 9x100 RWS Thru Bolt for the front, and 12x135, 12x142, & 10x135 RWS Thru Bolt for the rear.

July 2013 - 88/188 Disc Brake Hub

We introduced the 303 Firecrest disc brake wheel set with new front and rear black Zipp disc brake hubs, 24/24 spokes 100mm front and 135mm rear spacing. Note the spoke angles for disc brake wheels are different (lower angles) than regular road brake wheels and the lacing pattern is 1x, 1x front and 2x,2x on the rear.

2014 ZIPP 88/188 V9 Hubs

A completely new design, these hubs have a 17mm axle, pawls with individual leaf springs, 32 teeth ratchet ring, slotted flanges, aero clinch nuts, internal seals and lateral play adjustment. Front end caps are smoke colored with blue/smoke or red rear end caps. Wheel lacing is reversed with 2x drive and radial non-dive spoke pattern. Free hubs are NOT inter-changeable and require a separate conversion kit that includes spacers, seal and matching end cap. Maintenance instructions are available including exploded diagrams. The rear end caps on Shimano hubs changed from smoke to red in November 2009.

In May 2010 the 88 front hub spoke retention ring and clinch nut were altered. The spoke retention ring was made thinner, clinch nut diameter enlarged and the boss shape changed.

2013 ZIPP V8 188 Hub for 11 Speed

In October 2012 a new rear hub version was released to accommodate Shimano11 and Campagnolo 11 speed drive chains. The 188 V7 (2012 gray and black) rear hub was modified as follows:

- 1. Overall drop to drop length (OLD) is increased by 0.8mm
- 2. Axle internal diameter is reduced by 1.0mm (walls are thickened to increase axle strength) (left in image)
- 3. Non-drive side rear end cap is reduced by 1mm, '0' ring removed and colored black (left in image)
- 4. New 11 speed free hub with laser etching, serial number and shim for 10 speed

The V8 88/188 hubs are only available in black, they build a rear wheel which is more durable and marginally stiffer at the same spoke tension. The axle, end cap and free hub are not compatible with the older hub versions (2009-2012). A conversion service is available for only for 2012 188 hubs (gray or black) from Zipp certified wheel builders. The conversion kit is not sold after-market.

November 2012 -

Revised V6 black rear axle with thicker wall and anno treatment replaces original gray V6 axle. Note the revised axle uses the black end cap and not the red or blue.

October 2011 88/188 V7 Hubs

Re-design (V7) and improve the current 88/188 hubs with canted, rear, non-drive flange and rear axle changed to accommodate 7.5mm wider non-drive bearing location. Hub are offered in two color options - falcon gray and beyond black across the wheel line, (October 2011). These changes improve rear 188 hub axle durability and allow 6% stiffer wheels to be built with the same spoke tension. On the 88 front hub, the only change is the color options – the silver and ZedTech hub 88/188 hub versions are discontinued.

Note: the rear 188 hub shell and axle are NOT compatible with the earlier silver version. The hearings (61803) and cans and seals remain.

Note: the rear 188 hub shell and axle are NOT compatible with the earlier silver version. The bearings (61803) end caps and seals remain unchanged.

ZIPP HUB AND FREE HUB IDENTIFICATION

Free hubs Zipp 188 hubs 2009 -

Major changes in pawl design and shape. Each pawl now has its own leaf spring. Pawl socket ring is scalloped, seal is black. These free hubs are NOT interchangeable with earlier 182 or 208 models and are only sold in a conversion kit with seals, shims and endcaps. Note the 61803 bearings to accommodate the larger 17mm axle.

July 2012 - Campagnolo 11 Electronic

To accommodate Campy11 electronic, we re-machined blue anodized Campagnolo free hubs to remove a small notch at the start of the splines. During July 2012 all available 182 and 188 free hubs were reworked. Going forward new blue Campy11 free hubs will be fully anodized with no silver markings.

2013 Zipp 188 V8 Free Hub for 11 Speed

1.85mm spacer needed to run 10 speed with 2013 V8 11 speed free hub

The 11 speed free hub is not compatible with the previous version (V7) of the 188 free hub. It is recognized by the yellow laser etching and is assigned an individual serial number. This free hub must be used with the 2013 black axle and non-drive side endcap. To run 10 speed with this free hub, you will need the extra spacer (supplied with new wheels and conversions

ZIPP 182 Rear and 82 Front Hubs (2006-2008)

These hubs are distinguished from the 202/84 model by brightly colored free hub bodies (Shimano red, Campagnolo blue), a plastic retaining ring behind the carbon hub caps, a reduction in weight (30g), redesigned pawl springs and an increase in the rear ear flange dimensions (52mm).

Free hubs Zipp 182 - 208 hubs 2005-2008

Machined and forged / Shimano red Campagnolo blue

The difference between machined and forged Shimano free hub bodies is a dull, deeper maroon, rougher surface finish and a scribed ring 1/3 towards the seal between the body and the red pawl carrier in the forged body. Since mid year 2005, Shimano free hubs are red and Campagnolo are blue. These bodies have 2 x 61082 bearings and a red seal between the pawl carrier and the main body.

ZIPP 202 Rear and 84 Front Hubs (2002-2005)

Al alloy silver polished hub bodies, most easily recognized by carbon weave protective end caps on both front and rear hubs. Available for either Shimano or Campagnolo, the bodies are interchangeable, but are not compatible with earlier models due to over-sized 15mm axle on the 202 rear and 84 front hubs.

There are 2 versions of the silver free hub body for this hub model. The 202W free hub has a solid silver ring on the free hub side adjoining the pawls, while the 202P has grooves that are machined all the way through with a slight 'lip' at the end of each spline. Status discontinued (2012), spare parts (e.g. axles and non-drive end caps) may not be available or will be very hard to find.

Free Hubs 202P and 202W models

This is where we find the largest confusion. 202P has the grooves extending all the way across the main body with a small lip on the splines. The 202W (Shimano) has a solid silver ring at the back between the pawl carrier and the main body, the grooves are blocked.

ZIPP 282 Rear and 102 Front Hubs (1999 to 2001)

The 102 front and 282 rear hubs are an ideal combination of performance, weight, durability, and value. Recognizable from other ZIPP hubs by their black anodized all aluminum hub construction; the 102 and 282 are available for both Shimano 8/9 speed and Campagnolo 9/10 speed systems. The 102 and 282 are the first ZIPP hubs to utilize butted or oval straight pull spokes. Free-hub bodies are interchangeable. Both front and rear hubs turn on the highest quality industrial cartridge bearings available. These bearings were used in a number of subsequent ZIPP wheel sets. If you need parts for the 2 pawl earlier 282 hub (often called the Swiss version), you must change axle, end caps and free-hub to upgrade to the 3 pawl (USA) model. Hub maintenance notes. Status: discontinued, parts are difficult to find.

Note: early 282 hubs may be silver. When interchanging free hub bodies, check to see if the existing hub uses two or three pawls in the engagement mechanism and check bearing seal color.

In mid-2001 a 'USA' built version of the 282 was introduced. It is laser etched in the center of the hub flange with "USA" in silver on the black hub shell. Free-hub bodies are not inter-changeable between earlier 'swiss' versions and the usa version. Model 102 front: flange diameter = 23mm, center to flange = 39mm. Model 282 rear free hub: drive side flange = 51mm, non-drive flange = 33.5mm, center to drive side flange = 12mm, center to non-drive flange = 35mm. Maintenance notes.

Free hub bodies: 'USA' have blue bearings seals, 'Swiss' has black bearing seals - not inter-changeable.

Free Hubs 282 models

Champagne color with a solid back ring between the splines and the pawl carrier.
