ZIPP HUB AND FREE HUB IDENTIFICATION

<u>ZIPP ZR1</u>

Zipp ZR1 hubs are introduced in May 2020, as the standard hub for all Firecrest wheels. Engineered in our German Design Center, those hubs offer greater durability thanks to a new sealing design that protects the bearings. A whole new driver mechanism also increases engagement time, to create a faster, more responsive ride. Those new hubs exist in rim or disc brake.

ZIPP Cognition NSW Front and Rear Hubs

Zipp introduced the Cognition hubset along with the 303, 404, and 808 NSW wheelsets. The rear wheel utilizes a star-flanged design for straight pull spokes. The rear hub utilizes an Axial Clutch mechanism with metal injection molded ratchet rings and magnets in place of the typical pawl and spring system. Cognition hubs are compatible with SRAM, Campagnolo, and XDR driver bodies.

Zipp Cognition DB hubs is our disc brake solution for all NSW wheels, first introduced on 454 NSW DB. This hub utilizes the same Axial Clutch technology as its rim brake counterpart in a hub shell designed for j-bend spokes and a center locking brake interface. End caps and driver bodies can be exchanged, so this hub is compatible with all existing axle or drivetrain configuration.

ZIPP 76/176 Hubs

76/176 hubs are specifically designed for our value oriented Zipp 302 wheels. Those hubs use the same internal parts as our 77/177 hubs, and will therefore offer the same reliable, proven performance. The hub shell of 76/176 hubs is straightforward, with flanges for j-bend spokes.

76D/176D hubs are used on the Zipp 302 disc brake wheels. The hubs are built around the 77D/177D hub mechanism. End caps and driver bodies can be switched to match modern bikes configurations. Hub shells designed for j-bend spokes and a center locking brake interface.

ZIPP 88/188 V10 Hubs

We introduced the 88/188 V10 hub along with the 404 Firestrike wheel set. This wheel came with ceramic bearings and has slotted spoke holes on machined flanges. This hub was made for rim brake only, not offered in a disc brake platform.

ZIPP 77/177 - Rim Brake Hubs

This hub was designed for rim brake use on the 30 Course, 202 Tubular, and 202, 303, 404, and 808 Firecrest Carbon Clinchers. The hub shell utilizes a star-flanged design for straight pull spokes.

ZIPP 77D/177D

These hubs are designed for disc brake use on the 30 Course, 202 Firecrest, 303 Firecrest, 404 Firecrest, & 808 Firecrest. The 77D and 177D have machined hub flanges for straight pull spokes, and the axle end caps on the hub's axle are interchangable with different wheel spacings and wheel attachment systems, including quick-release, 12x100, 15x100, & 9x100 RWS Thru Bolt for the front, and 12x135, 12x142, & 10x135 RWS Thru Bolt for the rear.

88/188 Disc Brake Hub (July 2013 -)

We introduced the 303 Firecrest disc brake wheel set with new front and rear black Zipp disc brake hubs, 24/24 spokes 100mm front and 135mm rear spacing. Note the spoke angles for disc brake wheels are different (lower angles) than regular road brake wheels and the lacing pattern is 1x, 1x front and 2x,2x on the rear.

2014 ZIPP 88/188 V9 Hubs

A completely new design, these hubs have a 17mm axle, pawls with individual leaf springs, 32 teeth ratchet ring, slotted flanges, aero clinch nuts, internal seals and lateral play adjustment. Front end caps are smoke colored with blue/smoke or red rear end caps. Wheel lacing is reversed with 2x drive and radial non-dive spoke pattern. Free hubs are NOT inter-changeable and require a new axle and separate conversion kit that includes spacers, seal and matching end cap. Maintenance instructions are available including exploded diagrams. The rear end caps on Shimano hubs changed from smoke to red in November 2009.

ZIPP HUB AND FREE HUB IDENTIFICATION

In May 2010 the 88 front hub spoke retention ring and clinch nut were altered. The spoke retention ring was made thinner, clinch nut diameter enlarged and the boss shape changed.

2013 ZIPP V8 188 Hub for 11 Speed

In October 2012 a new rear hub version was released to accommodate Shimano11 and Campagnolo 11 speed drive chains. The 188 V7 (2012 gray and black) rear hub was modified as follows:

1. Overall drop to drop length (OLD) is increased by 0.8mm

- 2. Axle internal diameter is reduced by 1.0mm (walls are thickened to increase axle strength) (left in image)
- 3. Non-drive side rear end cap is reduced by 1mm, 'O' ring removed and colored black (left in image)
- 4. New 11 speed free hub with laser etching, serial number and shim for 10 speed

The V8 88/188 hubs are only available in black, they build a rear wheel which is more durable and marginally stiffer at the same spoke tension. The axle, end cap and free hub are not compatible with the older hub versions (2009-2012). A conversion service is available for only for 2012 188 hubs (gray or black) from Zipp certified wheel builders. The conversion kit is sold after-market.

November 2012 -

Revised V6 black rear axle with thicker wall and anno treatment replaces original gray V6 axle. Note the revised axle uses the black end cap and not the red or blue.

October 2011 88/188 V7 Hubs

Re-design (V7) and improve the current 88/188 hubs with canted, rear, non-drive flange and rear axle changed to accommodate 7.5mm wider non-drive bearing location. Hub are offered in two color options - falcon gray and beyond black across the wheel line, (October 2011).

These changes improve rear 188 hub axle durability and allow 6% stiffer wheels to be built with the same spoke tension. On the 88 front hub, the only change is the color options – the silver and ZedTech hub 88/188 hub versions are discontinued. Note: the rear 188 hub shell and axle are NOT compatible with the earlier silver version. The bearings (61803) end caps and seals remain unchanged.

Free hubs Zipp 188 hubs 2009 -

Major changes in pawl design and shape. Each pawl now has its own leaf spring. Pawl socket ring is scalloped, seal is black. These free hubs are NOT interchangeable with earlier 182 or 208 models and are only sold in a conversion kit with seals, shims and endcaps. Note the 61803 bearings to accommodate the larger 17mm axle.

July 2012 - Campagnolo 11 Electronic

To accommodate Campy 11 electronic, we re-machined blue anodized Campagnolo free hubs to remove a small notch at the start of the splines. During July 2012 all available 182 and 188 free hubs were reworked. Going forward new blue Campy 11 free hubs will be fully anodized with no silver markings.

2013 Zipp 188 V8 Free Hub for 11 Speed

1.85mm spacer needed to run 10 speed with 2013 V8 11 speed free hub

The 11 speed free hub is not compatible with the previous version (V7) of the 188 free hub. It is recognized by the yellow laser etching and is assigned an individual serial number. This free hub must be used with the 2013 black axle and non-drive side end-cap. To run 10 speed with this free hub, you will need the extra spacer (supplied with new wheels and conversions

ZIPP 182 Rear and 82 Front Hubs (2006-2008)

These hubs are distinguished from the 202/84 model by brightly colored free hub bodies (Shimano red, Campagnolo blue), a plastic retaining ring behind the carbon hub caps, a reduction in weight (30g), redesigned pawl springs and an increase in the rear ear flange dimensions (52mm).

Free hubs Zipp 182 - 208 hubs 2005-2008

Machined and forged / Shimano red Campagnolo blue

The difference between machined and forged Shimano free hub bodies is a dull, deeper maroon, rougher surface finish and a scribed ring 1/3 towards the seal between the body and the red pawl carrier in the forged body. Since mid year 2005, Shimano free hubs are red and Campagnolo are blue. These bodies have 2 x 61082 bearings and a red seal between the pawl carrier and the main body.
